

LIST OF TABLES

Table No.	Particulars	Page No.
3.1	District wise representation of the sample	85
3.2	Description of the sample	86
3.5	The total number of items with their serial numbers and their distribution over different areas/dimensions in the final scale after item analysis	89
3.6	Reliability of teacher effectiveness scale	91
3.7	Distribution of items in different classification of teaching skills	92
3.8	Item numbers for different aspects of spiritual intelligence self report inventory (SISRI - 24)	95
4.1	Difference between mean scores of government and private secondary school teachers with regards to teacher effectiveness along with its various dimensions	98
4.2	Difference between mean scores of male and female secondary school teachers with regards to teacher effectiveness along with its various dimensions	101
4.3	Difference between mean scores of rural and urban secondary school teachers with regards to teacher effectiveness along with its various dimensions	103
4.4(a)	Difference between mean scores of teacher effectiveness of secondary school teachers having less than 5, 5-10, 10-15 and above 15 years of teaching experience	105
4.4 (b)	Significance of mean difference in teacher effectiveness among secondary school teachers with regards to teaching experience	106
4.5	Difference between mean scores of government and private secondary school teachers having less than 5 years of teaching experience with regard to teacher effectiveness along with its various dimensions	107
4.6	Difference between mean scores of government and private secondary school teachers having 5-10 years of experience with regard to teacher effectiveness along with its various dimensions	109

4.7	Difference between mean scores of government and private secondary school teachers having 10-15 years of experience with regard to teacher effectiveness along with its various dimensions	112
4.8	Difference between mean scores of government and private secondary school teachers having more than 15 years of experience with regard to teacher effectiveness along with its various dimensions	114
4.9	Difference between mean scores of male and female secondary school teachers having less than 5 years of experience with regard to teacher effectiveness along with its various dimensions	117
4.10	Difference between mean scores of male and female secondary school teachers having 5-10 years of experience with regard to teacher effectiveness along with its various dimensions	119
4.11	Difference between mean scores of male and female secondary school teachers having 10-15 years of experience with regard to teacher effectiveness along with its various dimensions	121
4.12	Difference between mean scores of male and female secondary school teachers having more than 15 years of experience with regard to teacher effectiveness along with its various dimensions	124
4.13	Difference between mean scores of rural and urban secondary school teachers having less than 5 years of experience with regard to teacher effectiveness along with its various dimensions	126
4.14	Difference between mean scores of male and female secondary school teachers having more than 15 years of experience with regard to teaching competency along with its various dimensions	129
4.15	Difference between mean scores of rural and urban secondary school teachers having less than 5 years of experience with regard to teaching competency along with its various dimensions	131
4.16	Difference between mean scores of rural and urban secondary school teachers having 5-10 years of experience with regard to teaching competency along with its various dimensions	134
4.17	Difference between mean scores of rural and urban secondary school teachers having 10-15 years of experience with regard to teaching competency along with its various dimensions	137

4.18	Difference between mean scores of rural and urban secondary school teachers having more than 15 years of experience with regard to teaching competency along with its various dimensions\	139
4.19	Difference between mean scores of government and private secondary school teachers with regard to spiritual intelligence along with its various dimensions	142
4.20 (a)	Difference between mean scores of spiritual intelligence of secondary school teachers having less than 5, 5-10, 10-15 and above 15 years of teaching experience	144
4.20 (b)	Significance of mean difference in teaching competency among secondary school teachers with regards to teaching experience	144
4.21	Difference between mean scores of government and private secondary school teachers having less than 5 years of experience with regard to spiritual intelligence along with its various dimensions	145
4.22	Difference between mean scores of government and private secondary school teachers having 5-10 years of experience with regard to spiritual intelligence along with its various dimensions	148
4.23	Difference between mean scores of government and private secondary school teachers having 10-15 years of experience with regard to spiritual intelligence along with its various dimensions	150
4.24	Difference between mean scores of government and private secondary school teachers having more than 15 years of experience with regard to spiritual intelligence along with its various dimensions	153
4.25	Difference between mean scores of male and female secondary school teachers having less than 5 years of experience with regard to spiritual intelligence along with its various dimensions	156
4.26	Difference between mean scores of male and female secondary school teachers having 5-10 years of experience with regard to spiritual intelligence along with its various dimensions	158
4.27	Difference between mean scores of male and female secondary school teachers having 10-15 years of experience with regard to spiritual intelligence along with its various dimensions	161

4.28	Difference between mean scores of male and female secondary school teachers having more than 15 years of experience with regard to spiritual intelligence along with its various dimensions	163
4.29	Difference between mean scores of rural and urban secondary school teachers having less than 5 years of experience with regard to spiritual intelligence along with its various dimensions	166
4.30	Difference between mean scores of rural and urban secondary school teachers having 5-10 years of experience with regard to spiritual intelligence along with its various dimensions	168
4.31	Difference between mean scores of rural and urban secondary school teachers having 10-15 years of experience with regard to spiritual intelligence along with its various dimensions	171
4.32	Difference between mean scores of rural and urban secondary school teachers having more than 15 years of experience with regard to spiritual intelligence along with its various dimensions	173
4.33	Difference between mean scores of government and private secondary school teachers with regard to spiritual intelligence along with its various dimensions	176
4.34	Difference between mean scores of male and female secondary school teachers with regard to spiritual intelligence along with its various dimensions	178
4.35	Difference between mean scores of rural and urban secondary school teachers with regard to spiritual intelligence along with its various dimensions	180
4.36 (a)	Difference between mean scores of spiritual intelligence of secondary school teachers having less than 5, 5-10, 10-15 and above 15 years of teaching experience	182
4.36 (b)	Significance of mean difference in spiritual intelligence among secondary school teachers with regards to teaching experience	182
4.37	Difference between mean scores of government and private secondary school teachers having less than 5 years of experience with regard to spiritual intelligence along with its various dimensions	183

4.38	Difference between mean scores of government and private secondary school teachers having 5-10 years of experience with regard to spiritual intelligence along with its various dimensions	185
4.39	Difference between mean scores of government and private secondary school teachers having 10-15 years of experience with regard to spiritual intelligence along with its various dimensions	187
4.40	Difference between mean scores of government and private secondary school teachers having more than 15 years of experience with regard to spiritual intelligence along with its various dimensions	189
4.41	Difference between mean scores of male and female secondary school teachers having less than 5 years of experience with regard to spiritual intelligence along with its various dimensions	191
4.42	Difference between mean scores of male and female secondary school teachers having 5-10 years of experience with regard to spiritual intelligence along with its various dimensions	193
4.43	Difference between mean scores of male and female secondary school teachers having 10-15 years of experience with regard to spiritual intelligence along with its various dimensions	195
4.44	Difference between mean scores of male and female secondary school teachers having more than 15 years of experience with regard to spiritual intelligence along with its various dimensions	197
4.45	Difference between mean scores of rural and urban secondary school teachers having less than 5 years of experience with regard to spiritual intelligence along with its various dimensions	199
4.46	Difference between mean scores of rural and urban secondary school teachers having 5-10 years of experience with regard to spiritual intelligence along with its various dimensions	201
4.47	Difference between mean scores of rural and urban secondary school teachers having 10-15 years of experience with regard to spiritual intelligence along with its various dimensions	203
4.48	Difference between mean scores of rural and urban secondary school teachers having more than 15 years of experience with regard to spiritual	205

	intelligence along with its various dimensions	
4.49	Coefficient of correlation (r) between teacher effectiveness (along with its dimensions) and teaching competency of secondary school teachers (N=400)	208
4.50	Coefficient of correlation (r) between teacher effectiveness (along with its dimensions) and spiritual intelligence of secondary school teachers (N=400)	209
