

# TABLE OF CONTENTS

<i>Title</i>	<i>Page No.</i>
<b>Chapter 1: An introduction to <i>N</i>-heterocyclic carbene (NHC) catalysis</b>	<b>1-62</b>
1.1. Introduction	1
1.2. Historical background of carbenes	2
1.3. Organometallic carbene chemistry	4
1.4. Development of NHC-organocatalysis	5
1.5. Important action modes of NHC	9
1.5.1. Reactions involving NHC-bound Breslow intermediate	11
1.5.2. Reactions involving NHC-bound homoenolate intermediate	36
1.5.3. Reactions involving NHC-bound enolate intermediate	45
1.5.4. Reactions involving NHC under oxidative conditions	45
1.5.5. Reactions involving NHC-bound azolium dienolates	46
1.5.6. Reactions involving NHC-bound allenolate intermediate	48
1.5.7. Reactions involving NHC-bound <i>deoxy</i> -Breslow intermediate	49
1.5.8. Reactions involving single electron transfer pathways	52
1.5.9. Miscellaneous reactions	53
1.6. Conclusion and central theme of the present work	55
1.7. References	57
<b>Chapter 2: A facile access to 3,6-disubstituted <math>\alpha</math>-pyrones via carbene catalyzed formal [4+2] annulation of <math>\alpha</math>-chloroaldehydes and <math>\gamma</math>-keto sulfones</b>	<b>63-157</b>
<b>Part A: Introduction to <math>\alpha</math>-pyrone and preparation of starting reagents</b>	<b>63-73</b>
2.1. Introduction	63
2.2. Review of literature	65
2.2.1. General methods for the synthesis of $\alpha$ -pyrone	65
2.2.2. NHC-catalyzed synthesis of $\alpha$ -pyrone	69

<i>Title</i>	<i>Page No.</i>
2.3. Statement of the problem	70
2.4. Preparation of starting materials and NHC-precatalyst	71
2.4.1. Synthesis of $\alpha$ -chloroaldehydes	71
2.4.2. Synthesis of $\gamma$ -ketosulfones	71
2.4.3. Synthesis of NHC-precatalyst	72
2.5. Conclusion	73
<b>Part B: Introduction to NHC-bound enolate intermediate and its application to access 3,6-disubstituted <math>\alpha</math>-pyrone</b>	<b>74-157</b>
2.6. NHC-bound enolate intermediate-an introduction	74
2.7. Results and discussion	80
2.7.1. Optimization studies	80
2.7.2. Scope of the reaction (Substrate scope)	84
2.7.3. Proposed reaction mechanism	87
2.7.4. Synthetic utility of 3,6-disubstituted $\alpha$ -pyrone	87
2.8. Conclusion	88
2.9. Experimental section	89
2.10. References	115
2.11. NMR spectra of new compounds	117
<b>Chapter 3: A highly efficient NHC-catalyzed aerobic oxidation of aldehydes to carboxylic acids</b>	<b>158-217</b>
3.1. Introduction	158
3.2. An introduction to NHC under oxidative conditions	159
3.2.1. NHC-catalyzed reaction using inorganic oxidant	160
3.2.2. NHC-catalyzed reaction using oxygen as oxidant	161
3.2.3. NHC-catalyzed reaction using organic oxidant	164
3.2.4. NHC-catalyzed reaction <i>via</i> $\alpha,\beta$ -unsaturated acylazolium intermediate	166
3.2.5. Reactions <i>via</i> $\alpha,\beta,\gamma,\delta$ -unsaturated acylazolium intermediate	178
3.3. Some selected methods for the synthesis of carboxylic acids	179

<i>Title</i>	<i>Page No.</i>
3.4. Statement of the problem	185
3.5. Results and discussion	186
3.5.1. Optimization studies	186
3.5.2. Aerobic oxidation of aldehydes (Substrate scope)	188
3.5.3. Plausible reaction mechanism	191
3.6. Conclusion	192
3.7. Experimental section	192
3.8. References	203
3.9. NMR spectra of compounds	207
<b>Summary</b>	<b>218-222</b>
