

TABLE OF CONTENTS

	<i>Page. No.</i>
1. Introduction	1-4
2. Review of Literature	5-32
2.1 Bioethanol as a renewable fuel	5
2.2 Lignocellulosic biomass as feedstock for second generation bioethanol	6
2.3 Second generation bioethanol process	9
2.4 Challenges associated with bioethanol generation process	19
2.5 Strategies to address current challenges during bioethanol production process	24
3. Material and Methods	33-60
3.1 Chemicals used	33
3.2 Medium composition	33
3.3 Standard cultures	35
3.4 Isolation and screening of thermotolerant yeast	35
3.5 Identification and characterization of selected yeast	37
3.6 Strain improvement of selected yeasts by adaptive laboratory evolution (ALE)	41
3.7 Fermentation by the adapted yeast strains under synthetic medium	43
3.8 Sequential dilute acid-alkali pretreatment of lignocellulosic biomass	44
3.9 Optimization of sequential dilute acid-alkali pretreatment of sugarcane bagasse	44
3.10 Characterization and compositional analysis of lignocellulosic biomass	46
3.11 Cellulase production by fungi	50
3.12 Enzymatic saccharification of biomass	51
3.13 Optimization of saccharification	51
3.14 Separate hydrolysis and fermentation (SHF)	53
3.15 Batch simultaneous saccharification and fermentation (SSF) under shake-flask	54
3.16 Batch simultaneous saccharification and fermentation (SSF) at bench-top fermenter level	54
3.17 Fed-batch simultaneous saccharification and fermentation under shake-flask	55

3.18	Fed-batch simultaneous saccharification and fermentation at bench-top fermenter level	56
3.19	Pentose fermentation	57
3.20	Analytical methods	58
4.	Results	61-126
4.1	Isolation, screening and selection of thermotolerant inhibitor tolerant yeasts	61
4.2	Identification of screened yeast isolates SM, SM4, SM5 and SM7	64
4.3	Fermentation of yeasts under varied initial glucose concentrations at 42 °C	69
4.4	Growth kinetics of selected	73
4.5	Strain improvement of selected yeasts through adaptive laboratory evolution (ALE)	74
4.6	Fermentation efficiency of the adapted strains	84
4.7	Characteristics of the adapted strain <i>K. marxianus</i> JKH5 C60	86
4.8	Sequential dilute acid-alkali pretreatment of sugarcane bagasse	89
4.9	Characterization of sequentially pretreated sugarcane bagasse	100
4.10	Enzymatic saccharification of sequentially pretreated SCB	108
4.11	Optimization of enzymatic saccharification of sequentially pretreated sugarcane bagasse	109
4.12	Separate hydrolysis and fermentation of pretreated sugarcane bagasse	112
4.13	Simultaneous saccharification and fermentation of pretreated sugarcane bagasse	113
4.14	Simultaneous saccharification and fermentation at high gravity	115
4.15	Fed-batch SSF in the presence of inhibitors	120
4.16	Detoxification and fermentation of acid hydrolysate	124
4.17	Mass balance analysis	125
5.	Discussion	127-142
6.	Summary and Conclusion	143-148
7.	References	149-166
	Annexures	167-175
